

Students of FH Bielefeld (Technical University of Applied Science) enter the world of iNOEX

There is nothing better than practical experience! Students of FH Bielefeld, section of mechanical engineering focused on plastic technology, took this to heart and plunged into iNOEX's world of extrusion. It was a very eventful day in Bad Oeynhausen.

Reinhard Klose, managing partner with iNOEX GmbH, gave the introductory speech. In an exciting manner he described the company's development, starting with the idea to found the company to the significance it has today. Following were some speeches on product series and services of iNOEX and iBA. The morning was concluded by a speech given by Mirjana Strahinovic, a former student with FH Bielefeld who is now employed with iBA. Her special work field is the optimization of cooling stretches. The students who are in their fifth semester could see for themselves how a first job experience can look like.

After lunch which was used also to talk to other iNOEX staff, it was time to look at the Innovations and Technology Centre (ITZ) where products and their installation could be watched closely. It was particularly interesting for the visitors to see everything in live performance in iNOEX's ITZ. The start-up process of an extrusion line installed in the Centre and the pipe production were as interesting as the dimensional changes and the performance of MAXFLEXX forming chamber.

iNOEX and iBA would appreciate an even closer co-operation with universities and technical universities of applied sciences. Therefore we are especially pleased that Prof. Dr.-Ing. Christoph Jaroschek, head of mechanical engineering and head of plastic engineering would equally appreciate a closer co-operation between the Technical University and iNOEX/iBA. Prof. Dr.-Ing. Stefan Dormeier of the Lab of plastic engineering, said the organization and planning of the day were very successful and well prepared. We appreciate this positive feedback and are looking forward to future contacts!

iNOEX THE FUTURE OF EXTRUSION
