

WARP 16/800 in the PE pipe extrusion line at Pipelife Sverige AB

Recently, the commissioning of our new WARP 16/800 radar measuring system took place in one of the PE pipe extrusion lines at our customer Pipelife Sverige AB in Sweden. The commissioning on site was very successful, as was the intensive training of the operators. For this purpose, our service technician Petar was on site for a total of 2 weeks.

Especially in combination with our SAVEOMAT gravimetric systems, our high-precision radar-based inline measuring systems ensure high-quality end products and a fast ROI. This is the fourth WARP system in total at Pipelife's site in Ljung, Sweden. Besides the new WARP 16/800, there is also a WARP 8/250, a WARP 8/400 and a WARP 8/630 installed to ensure maximum efficiency and quality of the pipes produced.

We would like to thank Ove Söderberg (Process Development Coordinator) and the entire team at Pipelife Sverige AB for their trust in our solutions and the good cooperation.
